

SABARI.G

AI/ML Engineer

Email-Id: sabariguru47@gmail.com | LinkedIn: www.linkedin.com/in/sabari-g-24072002ya | Mobile no: +91 82200 81378

About me:

Engineer with hands-on experience building AI-driven systems for fintech and regulated financial environments, combining backend engineering and event-driven architectures. Strong exposure to wallet-based payment systems, risk and regulatory domains, including FRM concepts, with a proven ability and readiness to contribute across a wide range of finance-focused AI roles spanning compliance, analytics, tax, and investment-related and other use cases.

Work Experience:

Viyona Fintech India Pvt. Ltd.
Hyderabad, India

Total Duration: 10 Months

Junior AI / ML Engineer

July 2025 – Present

1. Designed and developed AI-powered systems including:
 - Server log summarization system for backend and cloud logs.
 - RAG-based chatbot for employee portal & internal knowledge and document querying.
2. Designed and developed REST APIs performing full CRUD operations, supporting core fintech and marketplace services.
 - Handled backend development, API troubleshooting, and production issue resolution, including addressing queries and bugs reported by frontend teams.
 - Prepared and executed API test cases to validate business logic, edge cases, and error handling before production releases.
3. Worked extensively on a Kafka-based event-driven architecture and owned the complete Notification Service end-to-end, including:
 - SMS delivery system (OTP's) & Email notification service(OTP's)
 - Message delivery (Login, Signup, verification & suspicious activities)
 - Event consumption, routing, retry mechanisms, and failure handling
 - Deployed and maintained notification services in production environments, ensuring reliability, scalability, and observability.
4. Contributed to Financial Risk Management (FRM) research, focusing on fraud detection concepts and RBI-defined risk indicators.
5. Integrated AI-enabled components with backend APIs and event pipelines

AI / ML Intern

April 2025: July 2025

1. Built an automated business listings scraper using Selenium and Google Places API to extract structured business data.
2. Implemented dual workflows for:
 - Browser-based automation using Selenium
 - Scalable API-based data extraction via Google Cloud (Google Places API)
3. Developed a query-based website chatbot that dynamically surfaced relevant internal website links using keyword mapping and basic intent detection.
4. Created a domain-specific Custom GPT (GPT-4) trained on fintech, eKYC, and product-related data to handle customer and internal queries.

Tech Stack:

Languages:	Python SQL (Basics)
AI & ML:	Generative AI (GenAI), RAG, Prompt Engineering Machine Learning (Scikit-learn, Pytorch) Llama Index, Ollama Model Context Protocol (MCP)
Frameworks & Libraries:	Fast API, LangChain, LangGraph Event & Messaging Systems: Kafka (Event-Driven Architecture)
Data Base:	MongoDB Vector Databases PostgreSQL
Cloud & Infrastructure:	Google Cloud Platform, Vertex AI AWS S3, EC2, Bed rock & Sage maker Docker (containerization & deployment)
Automation:	n8n workflow Automations
Tools & APIs:	OpenAI APIs, REST APIs Selenium, Google Places API Postman (API testing)
Dev & Collaboration Tools:	Git, GitHub Jupyter Notebook, VS Code, Cursor

Education:

1.MBA in Finance Great Lakes Institute of Management, Chennai, India	Dec 2025 - Ongoing
2.Diploma in Data Science & AI - Professional Boston Institute of Analytics, Pune, India	June 2024- Oct 2024
3.B.Tech in Mechatronics; 8.25 CGPA Symbiosis Skills and Professional University, Pune, India	June 2021- Sept 2024

PERSONAL PROJECTS:

Financial Behavior Modeling & Risk-Aware Analytics (Ongoing)

Building a finance-first analytical system to study financial behavior such as momentum, volatility, and regime shifts using Python.

Studying and modeling market behavior including momentum, volatility, and regime changes before introducing machine learning.

Implementing technical indicators (e.g., Bollinger Bands) as behavioral signals, not standalone trading rules.

Designing risk controls, and regime-aware filters prior to ML-based timing enhancements.

Focused on robustness and realism (drawdowns, volatility shifts, transaction costs) rather than curve-fitted back tests.

Market Regime Modeling with Markov Methods (Ongoing)

Exploring Markov Chains and Hidden Markov Models (HMMs) to identify and model market regimes such as trending, range-bound, and high-volatility states.

Studying probabilistic regime transitions to adapt strategy behavior and risk exposure dynamically.

Emphasis on interpretability, stability, and overfitting avoidance for regulated environments.

Portfolio RAG System (GenAI Project)

Built a Retrieval-Augmented Generation (RAG) system for portfolio content using vector-based document retrieval.

Implemented document ingestion, embedding-based search, Vector based retrieval and LLM-powered responses.

Designed to demonstrate real-world GenAI system architecture rather than static portfolio presentation.

Declaration:

I solemnly declare that all the information provided in this resume is true and correct to the best of my knowledge and belief.
