About me:

AI & Machine Learning Engineer with hands-on experience building AI-driven systems for fintech and regulated financial environments, combining backend engineering and event-driven architectures. Strong exposure to wallet-based payment systems, risk and regulatory domains, including FRM concepts, with a proven ability and readiness to contribute across a wide range of finance-focused AI roles spanning compliance, analytics, tax, and investment-related use cases.

Work Experience:

Viyona Fintech India Pvt. Ltd.

Total Duration: 10 Months

Hyderabad, India

Junior AI / ML Engineer

July 2025 – Present

- Designed and worked on **AI-powered systems** including:
 - **Server log summarization system** for backend and cloud logs
 - **RAG-based chatbot** for employee portal & internal knowledge and document querying
- Designed and developed REST APIs performing full CRUD operations, supporting core fintech and marketplace services.
- Handled backend development, API troubleshooting, and production issue resolution, including addressing queries and bugs reported by frontend teams.
- Prepared and executed API test cases to validate business logic, edge cases, and error handling before production releases.
- Worked extensively on a **Kafka-based event-driven architecture**
- Owned the complete Notification Service end-to-end, including:
 - SMS delivery system (otp)
 - Email notification service(otp)
 - Message delivery (Login, Signup, verification & suspicious activities)
 - Event consumption, routing, retry mechanisms, and failure handling
- Deployed and maintained notification services in production environments, ensuring reliability, scalability, and observability.
- Contributed to Financial Risk Management (FRM) research, focusing on fraud detection concepts and RBI-defined risk indicators.
- Integrated AI-enabled components with backend APIs and event pipelines

- Built an automated business listings scraper using Selenium and Google Places API to extract structured business data from Google Maps.
- Implemented dual workflows for:
 - Browser-based automation using Selenium
 - Scalable API-based data extraction via Google Cloud
- Developed a query-based website chatbot that dynamically surfaced relevant internal website links using keyword mapping and basic intent detection.
- Created a domain-specific Custom GPT (GPT-4) trained on fintech, eKYC, and product-related data to handle customer and internal queries.

PERSONAL PROJECTS:

Financial Behavior Modeling & Risk-Aware Analytics (Ongoing)

- Building a **finance-first analytical system** to study financial behavior such as momentum, volatility, and regime shifts using Python.
- Studying and modeling **market behavior** including momentum, volatility, and regime changes before introducing machine learning.
- Implementing technical indicators (e.g., Bollinger Bands) as **behavioral signals**, not standalone trading rules.
- Designing **risk controls, and regime-aware filters** prior to ML-based timing enhancements.
- Focused on **robustness and realism** (drawdowns, volatility shifts, transaction costs) rather than curve-fitted back tests.

Market Regime Modeling with Markov Methods (Ongoing)

- Exploring **Markov Chains and Hidden Markov Models (HMMs)** to identify and model market regimes such as trending, range-bound, and high-volatility states.
- Studying **probabilistic regime transitions** to adapt strategy behavior and risk exposure dynamically.
- Emphasis on **interpretability, stability, and overfitting avoidance** for regulated environments.

Portfolio RAG System (GenAI Project)

- Built a **Retrieval-Augmented Generation (RAG)** system for portfolio content using vector-based document retrieval.
- Implemented document ingestion, embedding-based search, Vector based retrieval and LLM-powered responses.
- Designed to demonstrate **real-world GenAI system architecture** rather than static portfolio presentation.

Tech Stack:

Languages: Python, SQL (Basics)

AI & ML:

- Generative AI (GenAI), RAG, Prompt Engineering
- Machine Learning Libraries (Scikit-learn, Pytorch)
- Llama Index, Ollama
- Model Context Protocol (MCP)
- Vector Databases

Frameworks & Libraries:

- Fast API, LangChain, LangGraph

Event & Messaging Systems:

- Kafka (Event-Driven Architecture)

DB's:

- MongoDB
- PostgreSQL

Cloud & Infrastructure:

- Google Cloud Platform, Vertex AI
- AWS S3, EC2, Bed rock & Sagemaker
- Docker (containerization & deployment)

Tools & APIs:

- OpenAI APIs, REST APIs
- Selenium, Google Places API
- Postman (API testing)

Dev & Collaboration Tools:

- Git, GitHub
- Jupyter Notebook, VS Code

Automation:

- n8n, Workflow Automation

Education:

1.MBA in Finance

Dec 2025 - Ongoing

Great Lakes Institute of Management, Chennai, India

2.Diploma in Data Science & AI - Professional

June 2024- Oct 2024

Boston Institute of Analytics, Pune, India

3.B.Tech in Mechatronics; 8.25 CGPA

June 2021- Sept 2024

Symbiosis Skills and Professional University, Pune, India
